

# INDICO DIGITAL EVIDENCE SERVER

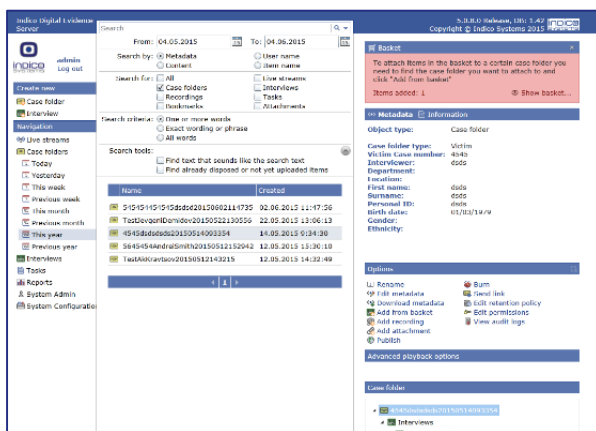

The *Indico Digital Evidence Server* is a state-of-the-art content management solution that securely stores and manages a wide variety of media for Criminal Justice departments. Whilst designed primarily for the Criminal Justice community, it also has many applications across fraud prevention and compliance.

Built on an open architecture and deployable in a range of IT configurations, the Digital Evidence Server will not only connect to the *Indico Recorder*, but also to databases that hold material from e.g. ANPR, Body Worn Video, CCTV, etc. This leads to seamless creation of the digital case folders.

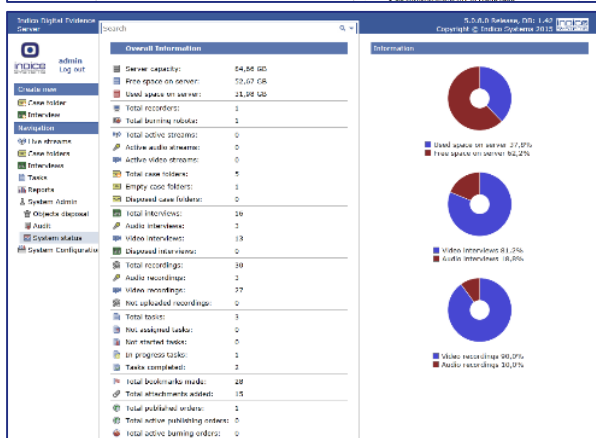

MoPI compliant, web-based and simple to install, the interface is very easy to use and will be relevant to a broad range of users, from typists to Major Crime managers, and from Administrators to Departments Heads of Criminal Justice and IT. Robust integration with Active Directory means that data is secure and only accessible by suitably authenticated personnel.

## Indico Digital Evidence Server

- Secure Evidence Management
- Web-based
- Minimal training required
- PACE/MoPI compliant
- Single Sign-On with Active Directory
- Designed to create an Electronic Case File

- External Import/Upload from
- Advanced reporting functionality
- Internal/External playback
- Live streaming to remote location
- Transcription management

- Editing and Publishing
- Full Audit log
- Advanced retention functionality
- Audio distortion
- Video pixilation

## RETURN ON INVESTMENT (ROI)

By investing in the Digital Evidence Server, organisations can transform the management of complex and disparate information. Traditionally the processes have been based around a range of material – tapes, discs, hard drives, written statements – now you can manage this information, securely and digitally.

For a fraction of the cost of more complex and cumbersome content management platforms, the Digital Evidence Server delivers tangible ROI. Outdated and costly practices can be transformed in a matter of weeks, meaning that departments can realise cost savings much earlier - vital in the current economic climate facing most forces.

- Cost-effective
- Quantifiable financial savings
- Quickly cost neutral
- Ultimately saving organisations time and money

## INTEGRATION

The Digital Evidence Server has been designed to be easy for IT departments to understand, deploy and manage. Many functions can be virtualised, and with the right environment in place installations can take a matter of days. Indico Systems has had extensive dialogue with many Heads of IT in many organisations, and integration with existing systems has been proven to be straightforward requiring minimal resource on the client side.

- Service orientated architecture
- Data migration from existing content management systems into the Digital Evidence Server
- Single or batch import/export of data
- Accepts the most commonly used formats
- API availability for integration with other content management platforms
